

**B) AMENDMENTS TO THE SPECIFICATION:**

Applicants submit the following replacement paragraph for the first full paragraph of the Specification appearing on page 3 thereof, commencing at line no. 28 and concluding at line no. 39:

--With the availability of increased memory and storage capacity within a client machine, several browsers now permit a plurality of web pages to be active simultaneously. Examples of such browsers include Opera (<http://www.opera.com>) and NetCaptor (<http://www.netcaptor.com>). Those browsers provide controls for managing multiple web pages on a single screen. In one example, shown in FIG. 2, tabs ~~252, 253,~~ 254 752, 753, 754 are provided along a lower portion of the HTML display area 791 of the browser interface 701. The tabs are "attached" to corresponding web pages. Tab 752 is attached to corresponding web page 751, which is displayed in the HTML display area 791. Tabs 753, 754 are attached to web pages that are active, but are not currently displayed in the HTML display area. The term "active" as used herein to describe a web page means a web page that has been retrieved or "loaded" from a network and is maintained in local memory or storage for immediate access.--
